

BRAZED CARBIDE BORING BAR SETS

- Proper brazing is done of the carbide tips to avoid chipping and breaking while the tool is in use.
- Tool life is extended because each bar has far more steel behind the cutting edge for heavier, chatter free cut.
- The same bars can bore flat-bottom holes.
- Shanks are grounded.
- The massive head behind the cutting edge promotes rigidity & long life by reducing vibration.
- Set Supplied in fine finished wooden stand.
